Nurse call systems are a crucial way of ensuring your residents can contact you in a time of need. It's important for residents to get help urgently when required. Nurse call systems help by alerting staff instantly that assistance is needed, providing peace of mind to both residents and families alike.

Abbot Fire can install your nurse call system. With a choice of the pull cord variety, or a wireless system where residents just press a button, you can choose the best type of system based upon your care home layout and residents' needs.

Nurse call systems work by ensuring those who need urgent assistance can

pull the cord, or press a button. This in turn sounds an alarm, alerting staff on duty that a resident needs immediate assistance.

Call points can be installed into individual rooms, communal areas and bathrooms, providing reassurance to residents that help is only a pull cord, or push button, away. Some systems are also available with additional capabilities, such as automatic bed wetting notification.

Abbot Fire understands that your care home needs to be flexible to accommodate your residents, that's why they provide a bespoke service. Your care home will be risk assessed,

so if you need to add call points, or move them, they will provide a flexible system tailored to meet your needs. They can service your existing system too.

Abbot Fire can also undertake a fire risk assessment for your premises; and service and install fire alarm systems. In fact, they are able to provide all fire safety products and services your care home may need to ensure fire safety compliance.

Abbot Fire Group can be contacted on 01280 824111, email: admin@abbotfiregroup.co.uk or visit www.abbotfiregroup.co.uk.
